Our product range includes the following series of test inks:

Test ink Series A - pursuant to DIN ISO 8296 and ASTM D 2578-99a. Blue, combination of **formamid and ethoxyethanol**. This standard type is most commonly used in the industriy and is suitable for PE, PP and similar substrates (not for PU and soft PVC).

Test ink Series B - pursuant to DIN 53364 and DIN ISO 8296. Light red, combination of **methanol and water**. The degree to which the fluids are toxic is a factor of the methanol content. It is safe for use on soft PVC.

Test ink Series C - developed in conformity with DIN ISO 8296. Light red, combination of **ethanol and water**. This series poses no health risks and can be used with all substrates.

Test ink Series E - colourless, **alkane series**, pure. The polarity of this clear liquid is zero.

Test ink Series F - colourless, combination of **water and sodium chloride**. For extensions for higher values greater than the wettability of 72 mN/m.
